FACTORS THAT CAUSE DAMAGE TO MEDICAL RECORDS IN THE OUTPATIENT FILING ROOM OF THE ISLAMIC HOSPITAL IN BANJARMASIN

Scientific Papers. Medical Record And Health Information Study Program. 2021

(xv+74)

Medical record is a file containing notes and documents regarding the patient's identity, examination, treatment, actions, and services provided to patients. The purpose of this study was to determine the factors causing damage to medical records in the outpatient filing room of the Islamic Hospital in Banjarmasin. This research is descriptive. Data obtained from observations, interviews, measurements. Data analysis with data collection, data reduction, data presentation, verification. From the research results, it was found that the damage to medical records in the outpatient filing room of the Islamic Hospital in Banjarmasin was 72%. Intrinsic factors which include paper and ink. Extrinsic factors, namely room conditions, humidity, temperature, mold, food and beverages can cause damage to medical records in the filing room of the Islamic Hospital in Banjarmasin. It is recommended to the Banjarmasin Islamic Hospital to add facilities in the filing room such as air conditioning, exhaust fans, camphor or camphor, and APAR (light fire extinguisher).
