DESAIN FORMULIR REKAM MEDIS RAWAT JALAN DI LABORATORIUM REKAM MEDIS STIKES HUSADA BORNEO BANJARBARU TAHUN 2021

KTI, Program Studi D3 Perekam dan Informasi Kesehatan, 2021 (XVI+55)

Rekam Medis yang terdapat di laboratorium rekam medis STIKes Husada Borneo terdiri dari 12 formulir rawat inap dan ada 5 formulir rawat jalan. Jika dibandingkan dengan Permenkes No. 269 tahun 2008, masih ada formulir rekam medis yang kurang seperti formulir pengkajian awal rawat jalan, formulir assesment rawat jalan dan rekam medis rawat jalan. Jika hal ini dibiarkan, akan berdampak pada tidak tercapainya tertib administrasi dikarenakan tidak adanya yang merancang formulir rekam medis di laboratorium rekam medis Stikes Husada Borneo. Penelitian ini bertujuan membuat formulir rekam medis rawat jalan di laboratorium Rekam Medis STIKes Husada Borneo Banjarbaru. Metode penelitian deskriptif kualitatif. Subjek penelitian terdiri dari informan utama adalah kepala laboratorium rekam medis dan informan triangulasi adalah Ketua Program Studi Perekam medis dan informasi Kesehatan dan Mahasiswa rekam medis. Instrumen menggunakan panduan wawancara dan observasi. Hasil penelitian menunjukkan bahwa terdapat 5 formulir rekam medis rawat jalan di Laboratorium antara lain formulir ringkasan riwayat klinis, formulir riwayat penyakit dan pemeriksaan fisik, formulir implementasi dan evaluasi tindakan keperawatan, formulir penempelan salinan resep dan formulir penempelan laboratorium sedangkan desain formulir rekam medis rawat jalan di Laboratorium belum ada perubahan dalam 5 tahun terakhir. Adapun formulir yang didesain antara lain formulir ringkasan riwayat klinis, formulir riwayat penyakit dan pemeriksaan fisik, formulir implementasi dan evaluasi tindakan keperawatan, formulir penempelan salinan resep, formulir penempelan laboratorium

Kata kunci : Desain formulir, formulir rawat jalan

DESIGN OUTPATIENT MEDICAL RECORD FORM AT THE STIKES HUSADA BORNEO LABORATORY, BANJARBARU, 2021

**KTI, D3 Medical record and health information program study, 2021
(XVI + 55)**

Medical records are available in the medical record laboratory of STIKES Husada Borneo consisting of 12 inpatient forms and 5 outpatient forms, when compared to Permenkes no. 269 2008, there are still inadequate medical record forms such as outpatient initial assessment forms, outpatient assessment forms and outpatient medical records. If this is allowed, it will have an impact on not achieving administrative order because no one has designed the medical record form in the medical record laboratory of Stikes Husada Borneo. This study aims to make an outpatient medical record form in the STIKes Husada Borneo Banjarbaru Medical Record Laboratory. Qualitative descriptive research method. The research subjects consisted of the main informant, the head of the medical record laboratory and the triangulation informant, the Head of the Medical Record and Health Information Study Program and the medical record students. The instrument uses an interview and observation guide. The results showed that there were 5 outpatient medical record forms in the laboratory, including a clinical history summary form, a medical history form and physical examination, an implementation and evaluation form for nursing actions, a form for attaching a prescription copy and a laboratory patching form, while the design of an outpatient medical record form in the laboratory. The laboratory hasn't changed in the last 5 years. The forms designed include a clinical history summary form, a medical history form and a physical examination, a nursing action implementation and evaluation form, a prescription copy attachment form, a laboratory patching form.

Keywords: form design, outpatient form
