

ABSTRAK

Tinjauan Penerapan Sensus Harian Rawat Inap di Rumah Sakit TK.III Dr. R. Soeharsono Tahun 2022

Karya Tulis Ilmiah. Program Studi Perekam Dan Informasi Kesehatan. 2022 (xi, 45, lampiran)

Sensus harian rawat inap berisikan formulir tentang mutasi keluar masuk pasien selasama 24 jam dimulai pukul 00.00 – 24.00. Penerapan pengumpulan sensus harian rawat inap di Rumah Sakit TK.III Dr. R. Soeharsono Banjarmasin belum sesuai, ditemukan pengumpulan sensus harian rawat inap lebih dari 1x24 jam atau bisa lebih sampai satu minggu. Tujuan penelitian ini untuk mengetahui penerapan sensus harian rawat inap di Rumah Sakit TK.III Dr. R Soeharsono Banjarmasin tahun 2022. Penelitian ini menggunakan metode deskriptif dengan jumlah responden sebanyak 5 orang. Hasil penelitian ini yaitu alur sensus harian rawat inap tidak sesuai karena tidak terdapat alur tertulis di ruangan rawat inap maupun di SPO sensus harian rawat inap tentang alur pengumpulan sensus harian rawat inap. Prosedur/Mekanisme pengisian sensus harian rawat inap tidak sesuai karena pengumpulan sensus harian rawat inap lebih dari 1x24 jam. Petugas yang mengisi/membuat sensus harian rawat inap di Rumah Sakit TK.III Dr. R Soeharsono Banjarmasin sudah sesuai karena yang mengisi/membuat sensus harian rawat inap adalah perawat/bidan yang bertugas di ruangan tersebut.

ABSTRACT

Overview of the Application of the Daily Inpatient Census at the TK.III Hospital by Dr. R. Soeharsono Year 2022

Scientific papers Recorder and Health Information Study Program. 2022 (xi, 45, appendix)

The daily inpatient census contains a form regarding transfers in and out of patients for 24 hours starting at 00.00–24.00. Application of daily inpatient census collection at TK.III Hospital Dr. R. Soeharsono Banjarmasin was not appropriate. It was found that the daily census collection of hospitalization was more than 1x24 hours or it could be more than one week. The purpose of this study was to determine the application of the daily inpatient census at the TK.III Dr. Hospital. R Soeharsono Banjarmasin in 2022. This study uses a descriptive method with a total of five respondents. The results of this study show that the inpatient daily census flow is not appropriate because there is no written flow in the inpatient room or in the inpatient daily census SPO regarding the inpatient daily census collection flow. The procedure/mechanism for filling out the daily inpatient census is not appropriate because the daily inpatient census collection is more than 1x24 hours. The officer who fills out and makes the daily census of inpatients at TK.III Hospital Dr. R Soeharsono Banjarmasin was appropriate because it was the nurse/midwife who filled out and made the daily inpatient census in that room.
