TINJAUAN DESAIN FORMULIR ASSESSMENT AWAL INSTALASI GAWAT DARURAT DI RSUD IDAMAN BANJARBARU TAHUN 2021

Karya Tulis Ilmiah. Program Studi D3 Perekam dan Informasi Kesehatan. 2021

(xv + 68)

Formulir assessment awal adalah formulir yang digunakan oleh petugas, dokter atau perawat untuk mengisi data tentang kondisi pasien dan tindakan pengobatannya. Bentuk desain formulir assessment awal harus mempertimbangkan berbagai aspek yang melekat di dalamnya sesuai dengan akreditasi rumah sakit dan pedoman rekam medis di RSUD Idaman Banjarbaru. Tujuan dari penelitian ini adalah untuk menganalisa desain formulir assesment awal pada Instalansi Gawat Darurat di RSUD Idaman Banjarbaru sesuai dengan standar yang telah ditetapkan rumah sakit dan kebutuhan petugas. Penelitian ini menggunakan metode penelitian deskriptif kualitatif. Subjek penelitian adalah kepala IGD, 1 staf IGD, 1 dokter dan kepala instalasi rekam medis, sedangkan objek penelitian adalah formulir assessment awal IGD. Hasil penelitian ini dapat disimpulkan bahwa formulir assessment awal IGD di RSUD Idaman Banjarbaru dibuat berdasarkan pedoman rekam medis dan standar akreditasi rumah sakit oleh komite rekam medis, sehingga desain formulir bisa memenuhi kebutuhan petugas di rumah sakit.

REVIEW OF THE DESIGN OF THE INITIAL ASSESSMENT FORM FOR EMERGENCY INSTALLATION AT IDAMAN BANJARBARU Hospital in 2021

Scientific papers. D3 Recording and Health Information Study Program. 2021.

(xv + 68)

Initial assessment form is a form used by officers, doctors or nurses to fill in data about the patient's condition and treatment actions. The design form of the initial assessment form must consider various aspects inherent in it in accordance with hospital accreditation and medical record guidelines at Idaman Hospital Banjarbaru. The purpose of this study was to analyze the design of the initial assessment form at the Emergency Installation at Idaman Hospital Banjarbaru in accordance with the standards set by the hospital and the needs of the staff. This study uses a qualitative descriptive research method. The research subjects were the head of the ER, 1 ER staff, 1 doctor and the head of the medical record installation, while the object of the study was the initial ER assessment form. The results of this study concluded that the initial ER assessment form at Idaman Hospital Banjarbaru was made based on medical record guidelines and hospital accreditation standards by the medical records committee, so that the design of the form could meet the needs of hospital staff.
